Note

Every enhancement and fix in this list will be denoted by the first release containing it in round brackets e.g. (8.3.1). Items that were introduced in a PTF issued prior to the release, will be additionally denoted by the PTF name in square brackets e.g. [ENF8300 1].

Enhancements

General

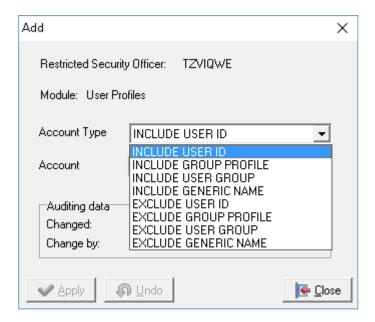

- 1. Installation program BSFHAROLC now supports password rules parameter when moving from one machine to another. Also redundant sections removed (8.3.1)
- 2. On installation, current user is now automatically added as a supervisor user in the GUI (8.3.1)
- 3. User for Apache HTTP instance changed to new low authority user ENFORCEGUI instead of system users QTMHTTP and QTMHTTP1 used previously (8.3.1)
- 4. File Group window now resizable (8.3.1)

Accelerator Package

5. ISO 17799 compliance policies renamed to ISO 27002 (8.3.1)

Administration Roles

6. Option added to restricted security officer for exclusion of specified user ID's (8.3.1)

Alert Center

7. File Audit alert type - option for short message (using RMTSMP/CUSTALERT program) (8.3.1)

Example of Normal Alert

System:SYSTEM69;UP; DATE: 2017-01-29; TIME: 10:58:59;TYPE: FILE AUDIT ALERT; USER: JANEL; DATA: JOURNAL:JANEL/EXAMPL0108; ACTION TYPE:UP - After image of a record updated in PFM; FILE:JANEL/TAVLUP;RRN=000000001;Field: DAYSUN Previous Value: SUNDAY New Value: SUNDAY1; Field: DAYMON Previous Value: MONDAY New Value: MONDAY1;

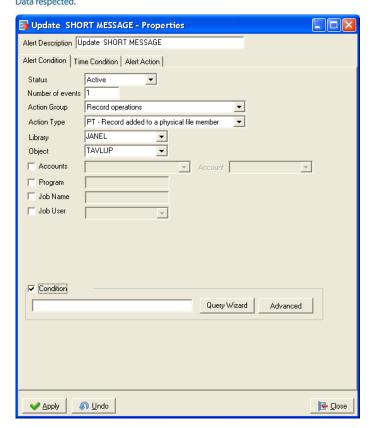

Example of Short Alert (using program CUSTALERT)

System:SYSTEM69;UP with cust; DATE: 2017-01-29; TIME: 10:50:56;Previous Value: 20160102 New Value: 20170102; Previous Value: 20160102 New Value: 20170102;

Specifying this program for other alert types will do nothing.

8. File Audit alert type - condition option added to alert condition for add and delete operations (now all action types PT PX DL DR) (8.3.1)

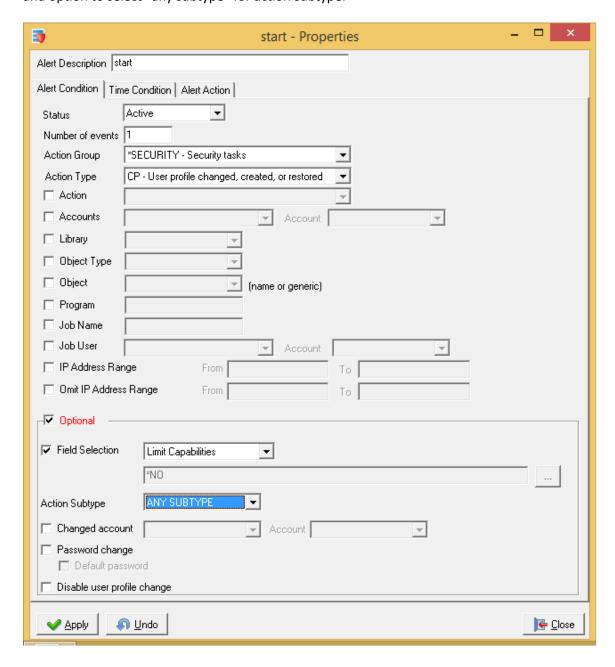

9. Formatting of new action types CA, CO, DO, ZR, ZC now supported (8.3.1)

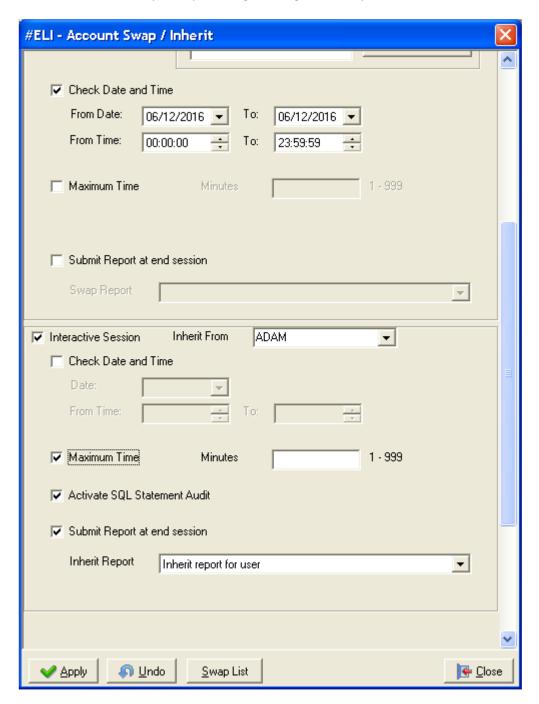

10. System Audit alert type, CP action type (User profile changed, created, or restored) new optional selection criteria: Limit Capabilities, Special Authority, Special Group Authority, and option to select "any subtype" for action subtype.

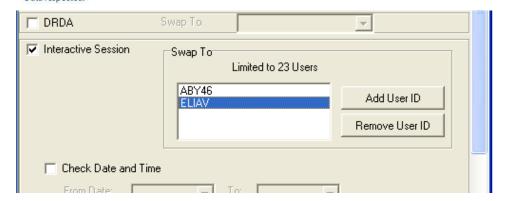

Application Access Control

11. New mechanism of temporarily working with high authority - inherit (8.3.1)

12. Multiple users can now be specified for swap to - permissions are combined (8.3.1).

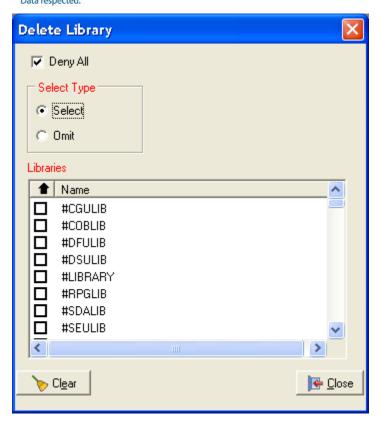

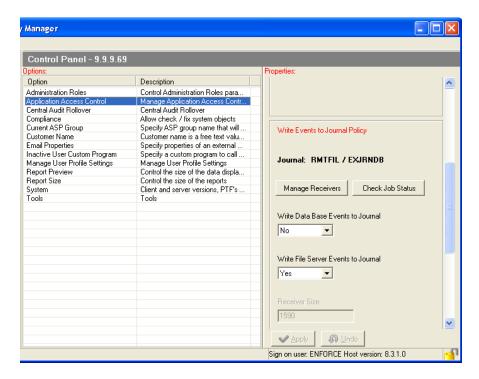

13. New deny all option for FTP and new permissions screen format (8.3.1)

14. File Server - option of logging events to journal and later update Central Audit file (as done already for database server) (8.3.1)

15. Log recording for file server can now be set for each function (8.3.1)

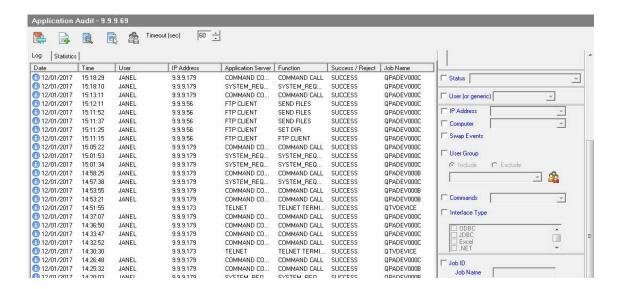

Application Audit

16. Report from Application Audit filtered screen (8.3.1)

Central Audit

17. System Audit event extraction internal mechanism changed - transparent to the user - as preparation for future enhancement (8.3.1)

Data Providers

- 18. SFTP protocol added to IFS destination type (8.3.1)
- 19. Output to syslog, connection type SSL (8.3.1)
- 20. System Audit actions CA CO DO ZR ZC added (8.3.1)

Encryption

- 21. RCAC field masking added for fields that are not supported by field procedures (8.3.1)
- 22. IFS encryption added (8.3.1)

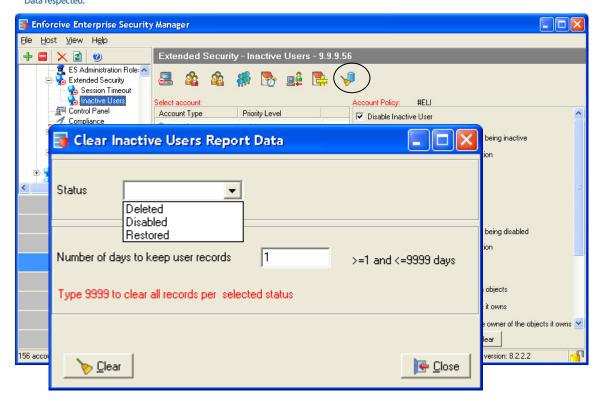

Green Screen Menu

23. Reports > Account Permission report: Event detail now included in the report. (8.3.1)

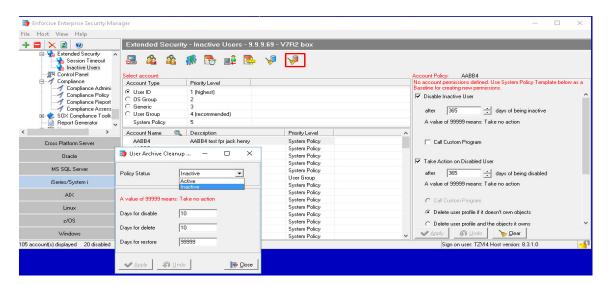

Inactive Users

24. Function added to clear inactive user data (8.3.1)

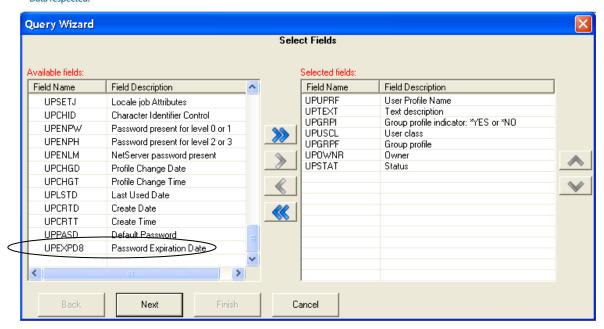

25. Function added User Archive Cleanup Policy, which lets you define a Policy to clear Inactive Users data by a scheduled job. (8.3.1)

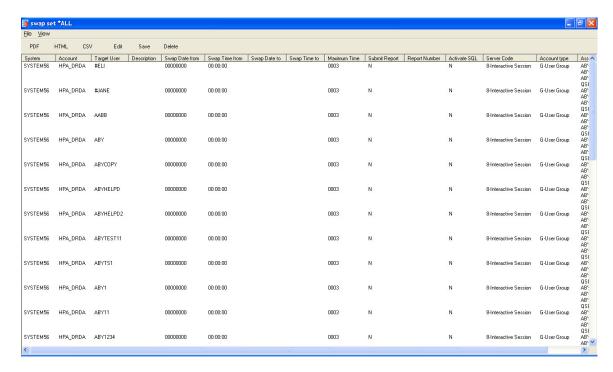

Report Generator

26. Report type User Profile: Password expiration data added to selection criteria (8.3.1)

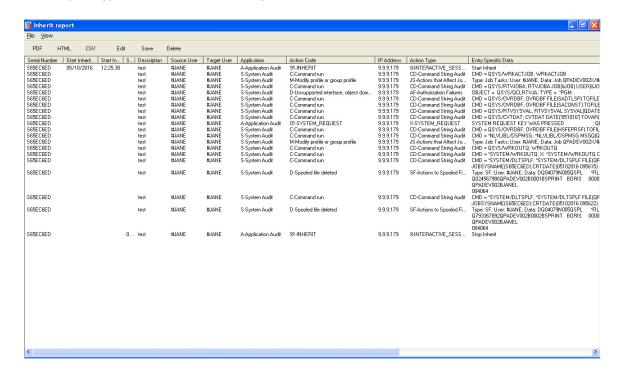

27. New report type Swap Settings (8.3.1)

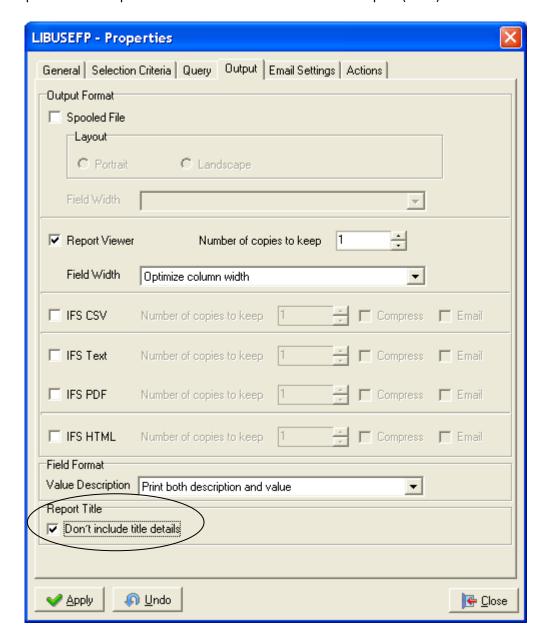

28. New report type Account Inherit Activity (8.3.1)

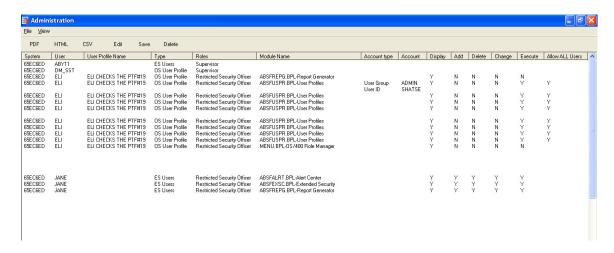

29. Option to omit report extended header information from report (8.3.1)

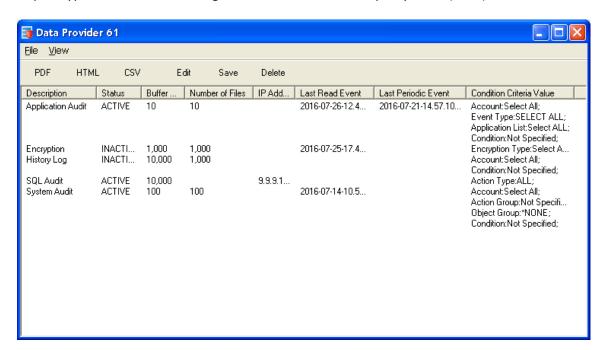

30. New report type Administration Roles (8.3.1)

31. Report type Data Provider Settings can now be run for multiple systems (8.3.1)

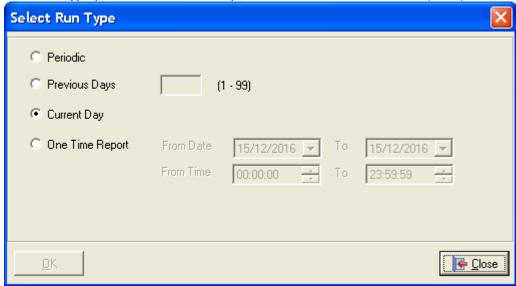

32. 7 New sample reports for Custom File report type (8.3.1)

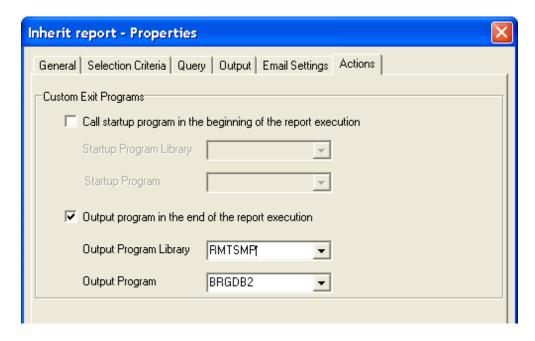

```
OUTFILE Menu Opt #1 - Object Information
OUTFILE Menu Opt #1 - File Information
OUTFILE Menu Opt #1 - File Trigger Information
OUTFILE Menu Opt #1 - Obj Auth by Type for Libs
OUTFILE Menu Opt #2 - Library Summary Info
OUTFILE Menu Opt #3 - Largest Objects by Size
OUTFILE Menu Opt #1 - File Info - REORG
```

33. New Run Type parameter 'Current Day', which will now be the default (8.3.1)

34. Option to create a DB2 file using supplied program BRGDB2 (8.3.1)

35. New available fields were added to the IFS Authority Report: Add authority, Delete authority, Execute authority, Object operational authority, Read authority and Update authority (8.3.1)

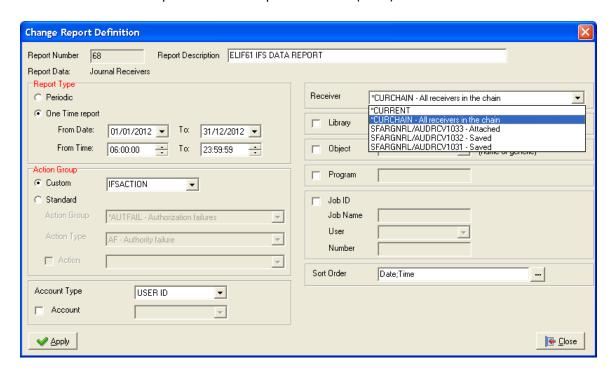

SQL Audit

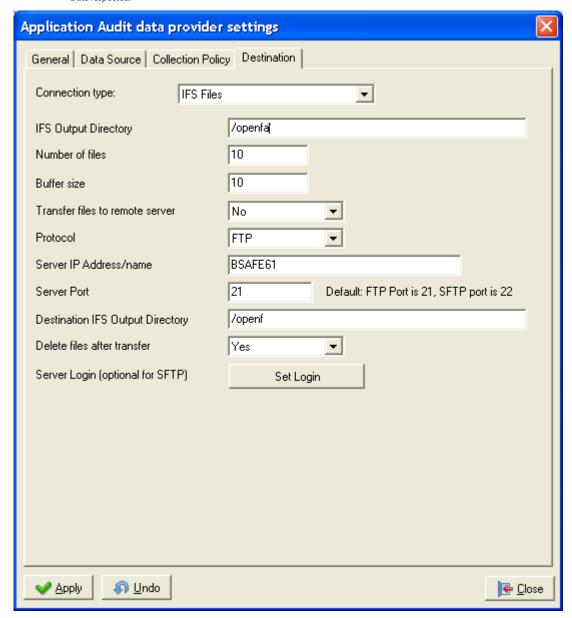

36. Number of rows affected added to event detail for insert, update and delete actions (8.3.1)

System Audit

37. Curavlchn receiver option added to report definition (8.3.1)

User Profiles

38. New parameters added to replication type Delete User (8.3.1)

Fixes

General

1. User ENFREP now not created automatically (8.3.1)

Administration Roles

2. Correction for List of restricted users, when GROUP PROFILE type account specified (8.3.1)

Alert Center

- 3. System Audit alert automatic disabling of user profile (8.3.1) now working
- 4. Message Queue alert now working correctly when job name and job user specified on definition.

Application Access Control / Exit Programs

- 5. Remote Command crash due to heap space exceeded fixed (8.3.1) [ENF8300 2]
- 6. File Protection multi-thread processing fixed (8.3.1) [ENF8300 2]
- 7. Swap report and swap session various fixes (8.3.1) [ENF8300_2]
- 8. Problem of missing environment type resolved (8.3.1)
- 9. Database write to journal various fixes (8.3.1)
- 10. Database. Environment parameter now working correctly in all cases. (problem of empty environment values solved by SQL API from V7R1)
- 11. User profile exit program efficiency improvements (8.3.1)
- 12. Storage limit message exit program now working (8.3.1)
- 13. Command Control activation status is now correct (8.3.1)

Central Audit

- 14. System Audit events support added for OS V7R3M0 (8.3.1) [ENF8300_2]
- 15. System Audit event extraction internal mechanism changed transparent to the user, preparation for future enhancement) (8.3.1)
- 16. Extract of history log data using a custom message group extracted messages that were not in group fixed (8.3.1)

Compliance

- 17. Object Auditing: Fix to Check Deviations on remote systems (8.3.1) [ENF8300_1]
- 18. IFS Object Auditing: Fix to Check Deviations on remote systems (8.3.1) [ENF8300_1]
- All categories: Fix to Check Deviations after a system is removed from Management > Remote Systems > Systems (8.3.1) [ENF8300_1]
- 20. Compliance Check System Values for remote servers: Log the system name and IP address of a remote server if retrieved, otherwise log a message (8.3.1) [ENF8300_1]
- 21. Support for the current SSL protocols & for the current cipher specification list (8.3.1) [ENF8300 1]
- 22. Check Adopted Authority: Adapt to enable copying from OS V7R1 to OS V5R4 (8.3.1) [ENF8300_1]
- 23. Added support for DDM user without special authorities in Compliance policies containing remote systems (8.3.1) [ENF8300 1]
- 24. Check System Value: Fix deviations check for System Value QSSLPCL (8.3.1) [ENF8300 1]
- 25. Check System Value: Handle System"*LOCAL" as the Local System (8.3.1) [ENF8300_1]
- 26. Check System Value: Remote jobs check if the work file exists & create it if it doesn't exist (8.3.1) [ENF8300_1]
- 27. All Categories: Define *LOCAL Template Creation Mode (8.3.1) [ENF8300 1]
- 28. All Categories: In case the Template Creation Mode was changed & a GUI session remained open & then the GUI creates a Template for the previous *LOCAL system: Send a warning message to re-enter the GUI (8.3.1) [ENF8300 1]
- 29. Define added values for system value QSSLCSL (8.3.1) [ENF8300_1]
- 30. Add Compliance Categories to the deletion of a Policy (8.3.1) [ENF8300 1]
- 31. Check Adopted Authority: If Check Deviations executed from an OS V5R4 box to an OS V7R1 box the job aborted because of different file formats (8.3.1) [ENF8300_1]
- 32. Check Group Members: If Check Deviations executed remotely & the remote DDM user had no special authority to execute the remote commands: The commands failed because of a lack of authority (8.3.1) [ENF8300_1]
- 33. IFS Object Authority: If "Read Only" is set to "Not Specified" no View Results will be displayed; Fix Authority will display information about deleted users; If Fix IFS authority had no object authorities for a user this was recorded incorrectly (8.3.1) [ENF8300_1]
- 34. All connected templates now deleted when policy deleted.
- 35. Logged results were not always in accordance with the set policy logging level both View Check Results and View Fix Results (8.3.1)
- 36. User Auditing template, check done on remote servers with a DDM user having inadequate authority didn't execute. Fixed (8.3.1)
- 37. User Auditing and User Profile templates, when selecting account type group profile, supplemental groups now included in dropdown list (8.3.1)
- 38. TCP/IP template. When fix submitted with no fix results (8.3.1)
- 39. Handling of case where main Central Audit file damaged (8.3.1)

Data Provider

- 40. System Audit Data Provider receiver name now correct (8.3.1)
- 41. Job date format changed to *YMD (8.3.1)
- 42. Performance improvement in creation of IFS file output (8.3.1)

- 43. Application Audit problem of output missing events (certain applications) to Syslog fixed (8.3.1)
- 44. System Audit collection policy, selection by custom action group now working correctly (8.3.1)

File Audit

- 45. Incorrect selection of fields to be included in File Audit report in the case of 2 file groups specified now fixed (8.3.1) [ENF8300_2]
- 46. Report when a specific file was specified in the report definition, the report did not produce results, now fixed (8.3.1)
- 47. Various fixes in report including correct selection of fields, and unhandled exception conditions (8.3.1)

Firewall

48. Various fixes for outgoing connection (8.3.1) [ENF8300_2]

Green screen commands

- 49. Find fields by string: Copy necessary objects (8.3.1) [ENF8300_1]
- 50. Set IASP now working correctly

Green screen reports

51. SWR status was incorrect for the IP address account option - now fixed. (8.3.1)

Inactive Users

52. When restoring deleted users, if the user to be restored has a group profile or 1 or more supplemental groups, these will now be restored together with the user. The owner of the restored user profiles will be the GUI user (8.3.1) [ENF8300_1]

LPAR Replication

- 53. Extended Security module now included in replication (8.3.1) [ENF8300 1]
- 54. Correction for program replicating data on target computer (workaround on possible locks) (8.3.1) [ENF8300 1]
- 55. Locks now avoided when packing and unpacking objects intended for data transfer (8.3.1) [ENF8300_1]
- 56. Report definitions now replicated properly

Object Authorities

57. Program crash due to file size limit fixed (8.3.1)

Report Generator

- 58. Application Audit report type incorrect data displayed when periodic and system group specified, now fixed (8.3.1) [ENF8300_2]
- 59. System Audit report type support added for OS V7R3M0 (8.3.1) [ENF8300_2]
- 60. Large Object Information report type fixed (8.3.1) [ENF8300_1]
- 61. Output Condition fixed (8.3.1) [ENF8300_1]
- 62. User Profile report type Fixed for remote servers (8.3.1) [ENF8300_1]
- 63. User Profile report type: "PASSWORD EXPIRED" column now has the same value as in the DSPUSRPRF and CHGUSRPRF commands (note that this is taken from "Password set expired by command" on the OS version V6R1 and higher and from "Set password to expired" on prior versions) (8.3.1) [ENF8300_1]
- 64. User Profile Report Type: MAX STORAGE column now displayed in the report as *NOMAX when the "Maximum storage allowed" parameter of the DSPUSRPRF command is *NOMAX (8.3.1) [ENF8300_1]
- 65. CODED CHARACTER SET IDENTIFIER now appears in the report as *SYSVAL when the "Coded character set identifier" parameter of the DSPUSRPRF command is *SYSVAL (8.3.1) [ENF8300 1]
- 66. Program Information report type: Retrieval of information from remote systems now fixed (8.3.1) [ENF8300_1]
- 67. Central Audit report: Work environment now correct (8.3.1) [ENF8300_1]
- 68. CPA reports: Program BRWMAIN fixed (8.3.1) [ENF8300_1]
- 69. Dataflow report type Work environment now correct (8.3.1) [ENF8300 1]
- 70. Swap report type report now provided correctly at the end of swap session; fix to description of swap; fix to actions of system audit in the report (8.3.1) [ENF8300 1]
- 71. Report Groups: IFS files from the Report Group will now be written in the specified IFS directory when not set to "Use Global Settings" (8.3.1) [ENF8300_1]
- 72. Object Authority report type: File BRGSQLFIL size property changed to *NOMAX (8.3.1) [ENF8300_1]
- 73. Field Masking: Retrieval of information (8.3.1) [ENF8300 1]
- 74. System Audit (Detailed) type for Remote system. Check Control Panel Report Size option System Audit Maximum Events to Process parameter. (8.3.1) [ENF8300_1]
- 75. All Report Generator Report Types used in Risk Assessment with PDF output: The output for previous reports was not cleared, so irrelevant data entered the PDF report. (8.3.1) [ENF8300_1]
- 76. A fix to the lack of authority when a "simple" DDM user is used to execute remote commands (8.3.1) [ENF8300_1]
- 77. Report type: Account Swap Activity is now fixed. (8.3.1) [ENF8300 1]
- 78. File Audit report group not working. Fixed. (8.3.1) [BRGFILB]
- 79. Command information report type new 2 fields added
- 80. Periodic reports running on multiple systems (i.e. using system group) problem of incorrect results now fixed.

- 81. All report types periodic report run for a selected system group was incorrect now fixed (8.3.1) [BRG8222_3]
- 82. Problems in creating report groups now resolved (8.3.1)
- 83. Insufficient authority for viewing reports in the report viewer fixed (8.3.1)
- 84. Imported report definitions not working correctly due to different product releases/PTFs now resolved.
- 85. File Audit report type field description added to value displayed in 'Field' column in report output.
- 86. System Audit report type incomplete list of output lines displayed, warning message displayed (maximum output size Nomax) now resolved.
- 87. Large Objects report and Custom Report types (where source taken from green screen options incorrect display of object size and date format now resolved.
- 88. Compliance Report File Share category now reported correctly (8.3.1)

SQL Statement

89. Support added for OS V7R3M0 (8.3.1) [ENF8300_2]

System Audit

- 90. Support added for OS V7R3M0 (8.3.1) [ENF8300_2]
- 91. Correction made to completion status of job that extracts the System Audit data to the rollover file (8.3.1) [ENF8300_1]

User Profiles

- 92. Password of *NONE inserted when, creating, copying or replicating user profiles on OS versionV7R2 or higher when the QPWDRULES system value contains *ALLCRTCHG (8.3.1) [ENF8300 1]
- 93. Generate Password now done according to QPWDRULES system value (8.3.1) [ENF8300 1]
- 94. Replication > Create & Change & Copy User Profile: Correct the handling of the Group profile and the Supplemental groups, & remove authority of user profile QTMHHTP1 to the user profile being created or changed. (8.3.1) [ENF8300_1]
- 95. When copying user profile, accounting code was missing. Now included.
