

IBM Power11 Performance Report

Power11 to Power7

July 8, 2025

Table of Contents

3	Introduction to Performance of IBM UNIX, IBM i, and Linux Operating System Servers
4	Section 1 – SPEC® CPU Benchmark Performance
4	Section 1a – Linux Multi-user SPEC® CPU2017 Performance (Power10)
4	Section 1b – Linux Multi-user SPEC® CPU2017 Performance (Power9)
4	Section 1c – AIX Multi-user SPEC® CPU2006 Performance (Power7, Power7+, Power8)
5	Section 1d – Linux Multi-user SPEC® CPU2006 Performance (Power7, Power7+, Power8)
6	Section 2 – AIX Multi-user Performance (rPerf)
6	Section 2a – AIX Multi-user Performance (Power8, Power9, Power10 and Power11)
10	Section 2b – AIX Multi-user Performance (Power9) in Non-default Processor Power Mode Setting
11	Section 2c – AIX Multi-user Performance (Power7 and Power7+)
14	Section 2d – AIX Capacity Upgrade on Demand Relative Performance Guidelines (Power8)
17	Section 2e – AIX Capacity Upgrade on Demand Relative Performance Guidelines (Power7 and Power7+)
21	Section 3 – CPW Benchmark Performance
21	Section 3a – CPW Benchmark Performance (Power8, Power9, Power10 and Power11)
24	Section 3b – CPW Benchmark Performance (Power7 and Power7+)
27	Section 4 – SPECjbb®2015 Benchmark Performance
27	Section 4a – SPECjbb®2015 Benchmark Performance (Power10)
27	Section 4b – SPECjbb®2015 Benchmark Performance (Power9)
27	Section 4c – SPECjbb®2015 Benchmark Performance (Power8)
27	Section 5 – AIX SAP® Standard Application Benchmark Performance
27	Section 5a – SAP® Sales and Distribution (SD) 2-Tier – AIX (Power7 to Power8)
28	Section 5b – SAP® Sales and Distribution (SD) 2-Tier – Linux on Power (Power7 to Power7+)
28	Section 5c – SAP® Business Warehouse – Enhanced Mixed Load – Linux on Power (Power8)
29	Section 6 – AIX Oracle® e-Business Suite (eBS) Benchmark Performance (Power8)
29	Section 7 – AIX Oracle® Siebel Benchmark Performance (Power7 and Power8)
30	Notes on Performance Benchmarks and Values
31	Notes on Performance Estimates

Introduction to Performance of IBM UNIX, IBM i and Linux Operating System Servers

July 2025

This document contains performance and benchmark results for IBM® Power® servers and IBM PowerLinux servers that run the UNIX® (AIX®), IBM i and Linux® operating systems

This release contains the rPerf result for new offering of Power® E1180 , E1150 , S1124 and S1122.

Changes from July 2025 version are highlighted thus.

Section 1 – SPEC® CPU Benchmark Performance

Section 1a – AIX Multi-user SPEC® CPU2017 Performance (Power10)

All results in this table reflect performance with firmware and Operating System updates to mitigate Common Vulnerabilities and Exposures issue numbers CVE-2017-5715, CVE-2017-5753 and CVE-2017-5754 known as Spectre and Meltdown.

Model	Processor/ # Cores	GHz	Inst/Data	Cache	SPECrate2017		OS Version
			Cache L1 (KB) Per core	L2/L3/L4 (MB)/ System	_int_peak	_int_base	
E1080	p10/120	3.55 – 4.0	96/64	240/960/-	2170	1700	AIX 7.2
E1050	p10/96	2.95-3.9	96/64	192/960/-	1580	1220	AIX 7.3

Section 1b – Linux Multi-user SPEC® CPU2017 Performance (Power9)

All results in this table reflect performance with firmware and Operating System updates to mitigate Common Vulnerabilities and Exposures issue numbers CVE-2017-5715, CVE-2017-5753 and CVE-2017-5754 known as Spectre and Meltdown.

Model	Processor/ # Cores	GHz	Inst/Data	Cache	SPECrate2017		OS Version
			Cache L1 (KB) Per core	L2/L3/L4 (MB)/ System	_int_peak	_int_base	
S924	p9/24	3.4 – 3.9	64/64	12/240/-	277	213	SLES 12 SP3
E950 ¹	p9/40	3.4 – 3.8	64/64	20/400/512	475	392	SLES 12 SP3

NOTE: Power9 frequency is expressed as a range from Typical GHz to Max GHz.

NOTE: The Power S924 and Power E950 by default will have its Power Management mode set to Max Performance. This mode dynamically optimizes the processor frequency at any given time based on CPU utilization and operating environmental conditions.

FOOTNOTE 1: Power E950 performance numbers have been submitted for review and publication.

Section 1c – AIX Multi-user SPEC® CPU2006 Performance (Power7, Power7+, Power8)

Performance results in this table published before 2/27/2018 do not include firmware and operating system security updates to mitigate Common Vulnerabilities and Exposures issue numbers CVE-2017-5715, CVE-2017-5753 and CVE-2017-5754 known as Spectre and Meltdown.

NOTE: Power9 frequency is expressed as a range from Typical GHz to Max GHz.

NOTE: Up to 5% additional rPerf may be realized for Power7 and Power8 processor-based systems with Intelligent Energy Optimization enabled depending on the system.

NOTE: The Power S922, Power S924, Power E950, and Power E980 systems by default will have its Power Management mode set to Max Performance. The S914 system by default will have its Power Management mode set to Dynamic Performance. Both modes dynamically optimize the processor frequency at any given time based on CPU utilization and operating environmental conditions.

NOTE: Some Power E880 and Power E880C systems may include a mix of 40-core and 48-core LPARs.

NOTE: All Power11 Systems by default will have its Power Management mode set to Max Performance.

FOOTNOTE 1: Includes 9009-42G, -41G and -22G

Section 2b – AIX Multi-user Performance (Power9) in Non-default Processor Power Mode Setting

All results in this table reflect performance with firmware and Operating System updates to mitigate Common Vulnerabilities and Exposures issue numbers CVE-2017-5715, CVE-2017-5753 and CVE-2017-5754 known as Spectre and Meltdown.

Model	Processor / # Cores	Freq. GHz*	Inst/Data	Cache	LPAR Size# cores	rPerf ST	rPerf SMT2	rPerf SMT4	rPerf SMT8
			Cache L1 (KB) Per core	L2/L3 (MB)/ System					
S914	p9/4	2.3 – 3.8	64/64	2/40	4	32.3	54.9	75.7	95.4
S914	p9/6	2.3 – 3.8	64/64	3/60	6	47.3	80.4	110.9	139.8
S914	p9/8	2.8 – 3.8	64/64	4/80	8	68.3	116.1	160.2	201.8

NOTE: Power9 frequency is expressed as a range from Typical GHz to Max GHz.

NOTE: The performance numbers shown here are for Power S914 with its Power Management mode set to non-default Max Performance. This mode dynamically optimizes the processor frequency at any given time based on CPU utilization and operating environmental conditions. Running Power S914 systems in the non-default power mode of Max Performance mode may cause measurably higher sound levels under high utilization.

Section 2c – AIX Multi-user Performance (Power7 and Power7+)

Performance results in this table published before 2/27/2018 do not include firmware and operating system security updates to mitigate Common Vulnerabilities and Exposures issue numbers CVE-2017-5715, CVE-2017- 5753 and CVE-2017-5754 known as Spectre and Meltdown.

NOTE: Up to 5% additional rPerf may be realized for Power7 processor-based systems with Intelligent Energy Optimization enabled depending on the system.

Section 2d – AIX Capacity Upgrade on Demand Relative Performance Guidelines (Power8 and Power9)

All results in this table reflect performance with firmware and Operating System updates to mitigate Common Vulnerabilities and Exposures issue numbers CVE-2017-5715, CVE-2017-5753 and CVE-2017-5754 known as Spectre and Meltdown.

NOTE: Up to 5% additional rPerf may be realized for Power8 processor-based systems with Intelligent Energy Optimization enabled depending on the system.

NOTE: Power9 processor-based frequency is expressed as a range from Typical GHz to Max GHz.

NOTE: Power E980 systems by default will have its Power Management mode set to Max Performance. This mode dynamically optimizes the processor frequency at any given time based on CPU utilization and operating environmental conditions.

Section 2e – AIX Capacity Upgrade on Demand Relative Performance Guidelines (Power7 and Power7+)

Performance results in this table published before 2/27/2018 do not include firmware and operating system security updates to mitigate Common Vulnerabilities and Exposures issue numbers CVE-2017-5715, CVE-2017- 5753 and CVE-2017-5754 known as Spectre and Meltdown.

NOTE: Power9 frequency is expressed as a range from Typical GHz to Max GHz.

FOOTNOTE 1: The Power S922, Power S924, and Power E980 by default will have its Power Management mode set to Max Performance. The Power S914 by default will have its Power Management mode set to Dynamic Performance. Both modes dynamically optimize the processor frequency at any given time based on CPU utilization and operating environmental conditions.

FOOTNOTE 2: includes 9009-42G, -41G and -22G

Section 3b –CPW Benchmark Performance (Power7 and Power7+)

Performance results in this table published before 2/27/2018 do not include firmware and operating system security updates to mitigate Common Vulnerabilities and Exposures issue numbers CVE-2017-5715, CVE-2017- 5753 and CVE-2017-5754 known as Spectre and Meltdown.

FOOTNOTES:

1. CPW value for 3.7 cores of 4 total cores. 0.3 core is allocated for VIOS.
2. CPW value for 7.5 cores of 8 total cores. 0.5 core is allocated for VIOS.
3. CPW value for 15 cores of 16 total cores. 1 core is allocated for VIOS.
4. CPW value for 30 cores of 32 total cores. 2 cores are allocated for VIOS.
5. CPW value for 3.5 cores of 4 cores. 0.5 core is allocated for VIOS.
6. CPW value for 7 cores of 8 total cores. 1 core is allocated for VIOS.
7. CPW value for 15 cores of 16 total cores. 1 core is allocated for VIOS.
8. CPW value for 23 cores of 24 total cores. 1 core is allocated for VIOS.
9. CPW value for 31 cores of 32 total cores. 1 core is allocated for VIOS.
10. CPW is limited to 32 core partition sizes. Larger core configurations are measured with two or more partitions.
11. CPW values for the Power 780 with TurboCore enabled are measured with 8 core partitions.

12. CPW value for the 32 core Power 795 with TurboCore enabled is measured with 16 core partitions.

CPW values for POWER System i™ models not listed may be obtained from: <http://www.ibm.com/systems/resources/pcrm.pdf>

Section 4 – SPECjbb®2015 Benchmark Performance

Section 4a – SPECjbb®2015 Benchmark Performance (Power10)

Model	Proc /# Cores	GHz	Inst/Data L1 Cache	L2/L3/L4 Cache	SPECjbb2015-MultiJVM		OS Version
			(KB)/core	(MB)/system	max-jOPS	critical-jOPS	
E1050	p10/96	2.95-3.9	96/64	192/960/-	753796	368507	RHEL 8.5

NOTE: Power10 processor-based frequency is expressed as a range from Typical GHz to Max GHz.

Section 4b – SPECjbb®2015 Benchmark Performance (Power9)

All results in this table reflect performance with firmware and Operating System updates to mitigate Common Vulnerabilities and Exposures issue numbers CVE-2017-5715, CVE-2017-5753 and CVE-2017-5754 known as Spectre and Meltdown.

Model	Proc /# Cores	GHz	Inst/Data L1 Cache	L2/L3/L4 Cache	SPECjbb2015-MultiJVM		OS Version
			(KB)/core	(MB)/system	max-jOPS	critical-jOPS	
S924	p9/24	3.4 - 3.9	64/64	12/240/-	165,581	56,942	SLES 12 SP3

NOTE: Power9 processor-based frequency is expressed as a range from Typical GHz to Max GHz.

NOTE: The Power S924 by default will have its Power Management mode set to Max Performance. This mode dynamically optimizes the processor frequency at any given time based on CPU utilization and operating environmental conditions.

Section 4c – SPECjbb®2015 Benchmark Performance (Power8)

Performance results in this table published before 2/27/2018 do not include firmware and operating system security updates to mitigate Common Vulnerabilities and Exposures issue numbers CVE-2017-5715, CVE-2017-5753 and CVE-2017-5754 known as Spectre and Meltdown.

Model	Proc /# Cores	GHz	Inst/Data L1 Cache	L2/L3/L4 Cache	SPECjbb2015-MultiJVM		OS Version
			(KB)/core	(MB)/system	max-jOPS	critical-jOPS	
S812LC	p8/10	2.92	32/64	5/80/32	44,883	13,032	Ubuntu 14.04.3

Section 5 – AIX SAP® Standard Application Benchmark Performance

Section 5a – SAP® Sales and Distribution (SD) 2-Tier – AIX (Power7 to Power10)

Performance results in this table published before 2/27/2018 do not include firmware and operating system security updates to mitigate Common Vulnerabilities and Exposures issue numbers CVE-2017-5715, CVE-2017- 5753 and CVE-2017-5754 known as Spectre and Meltdown.

Notes on Performance Benchmarks and Values

The performance benchmarks and the values shown here were derived using particular, well configured, development-level computer systems. Unless otherwise indicated for a system, the values were derived using fully populated DIMM slots and external cache if external cache is supported on the system. All performance benchmark values are provided "AS IS" and no warranties or guarantees are expressed or implied by IBM. Actual system performance may vary and is dependent upon many factors including system hardware configuration and software design and configuration. Buyers should consult other sources of information to evaluate the performance of systems they are considering buying and should consider conducting application-oriented testing. For additional information about the performance benchmarks, values and systems tested, please contact your IBM local Branch Office or IBM Authorized Reseller or access the following on the Web: <http://www.spec.org>

All performance measurements for the IBM Power and IBM PowerLinux, with systems running AIX or AIX 5L operating systems unless otherwise indicated to have used Linux. For new and upgraded systems, the latest versions of AIX and Linux and the latest versions of IBM's high-performance C, C++, and FORTRAN compilers for AIX and Linux were used. All other systems used previous versions of the operating systems and compilers.

SPEC® CPU2017 - SPEC CPU2017 focuses on compute-intensive performance including the processor, memory subsystem, and compilers. The benchmark does not stress other components such as networking, graphics, Java libraries and the I/O system. Compared to the SPEC CPU2006, the total source code has increased because most benchmarks in this suite are derived from real applications. **SPECrate 2017 Integer** suite has ten benchmarks, and the **SPECrate 2017 Floating Point** suite has thirteen benchmarks. For the detailed explanation of this benchmark, the metrics, and the run rules, please refer to the Web: <https://www.spec.org/cpu2017/Docs/overview.html>

SPEC® CPU2006 - SPEC CPU2006 focuses on compute-intensive performance including the processor, memory subsystem, and compilers. The benchmark does not stress other components such as networking, graphics, Java libraries and the I/O system. **SPECrate 2006 Integer** suite has twelve benchmarks, and the **SPECrate 2006 Floating Point** suite has seventeen benchmarks. For the detailed explanation of this benchmark, the metrics, and the run rules, please refer to the Web: <https://www.spec.org/cpu2006/Docs/readme1st.html>

SPECjbb®2015 - This benchmark measures Java performance. Performance metrics are provided for both pure throughput and critical throughput under service-level agreements (SLAs), with response times ranging from 10 to 100 milliseconds. For the detailed explanation of this benchmark, the metrics, and the run rules, please refer to the Web: <https://www.spec.org/jbb2015/docs/userguide.pdf>

Application Benchmarks

Oracle® Applications - Benchmark overview information: <http://www.oracle.com/us/solutions/benchmark/apps-benchmark/index.html>

Notes on Performance Estimates

rPerf (Relative Performance) is an estimate of commercial processing performance relative to other IBM UNIX systems. It is derived from an IBM analytical model which uses characteristics from IBM internal workloads, OLTP and SPEC benchmarks. The rPerf model is not intended to represent any specific public benchmark results and should not be reasonably used in that way. The model simulates some of the system operations such as CPU, cache and memory. However, the model does not simulate disk or network I/O operations.

rPerf estimates are calculated based on systems with the latest levels of AIX and other pertinent software at the time of system announcement. Actual performance will vary based on application and configuration specifics. The IBM eServer pSeries 640 is the baseline reference system and has a value of 1.0. Although rPerf may be used to approximate relative IBM UNIX commercial processing performance, actual system performance may vary and is dependent upon many factors including system hardware configuration and software design and configuration. Note that the rPerf methodology used for the Power10 processor-based systems is identical to that used for the Power9 and Power8 processor-based systems. Variations in incremental system performance may be observed in commercial workloads due to changes in the underlying system architecture.

Commercial Processing Workload (CPW) is a relative measure of performance of processors running the IBM i operating system. Performance in client environments may vary. The value is based on maximum configurations. More performance information is available in the Performance Capabilities Reference at: <http://www.ibm.com/systems/resources/pcrm.pdf>.

All performance estimates are provided "AS IS" and no warranties or guarantees are expressed or implied by IBM. Buyers should consult other sources of information, including system benchmarks, and application sizing guides to evaluate the performance of a system they are considering buying. For additional information about rPerf and CPW, contact your local IBM office or IBM authorized reseller.

IBM hardware products are manufactured from new parts, or new and used parts. Regardless, our warranty terms apply.

This equipment is subject to FCC rules. It will comply with the appropriate FCC rules before final delivery to the buyer.

Information concerning non-IBM products was obtained from the suppliers of these products or other public sources. Questions on the capabilities of the non-IBM products should be addressed with the suppliers.

All performance information was determined in a controlled environment. Actual results may vary. Performance information is provided "AS IS" and no warranties or guarantees are expressed or implied by IBM.
